Federal Ministry of Health warns against Ricin

The Federal Health Minister Walter Heisenberg warns in his latest publication against the toxicant ricin. The water soluble protein, which is obtained from the seed husks of the miracle tree, is considered to be one of the most toxic proteins at all.

Ricin leads to heavy symptoms and death, already in small doses.

A feature of the poison is that it, in combination with beta blockers (drugs against cardiovascular diseases), can't be detected in any body fluid. Against Ricin exists currently no antidote, which is why the Minister explicitly warns against the consumption

Johannes says:

Dear Carl,

I have managed to get ricin so we can put our plan into action!

We can start to watch out for our dream home in Miami and eventually start the new life we've always dreamed of.

Love and thrilled of anticipation Your Johannes
